PROFILE SUMMARY

Business Analyst/Product Owner with **9 years of experience** delivering **AI-driven digital solutions, virtual assistants, and enterprise-scale automation** for telecom and consumer platforms. Skilled in **Genesys/Google Dialogflow**, **AI/ML automation**, **CRM/Contact Center integrations**, and **Agile/SAFe product delivery**. Proven success designing **RAG-powered conversational AI**, driving **omnichannel enablement**, and leading **cross-functional product squads** to achieve measurable business outcomes. Recognized for combining **technical depth and business acumen** to translate strategy into scalable digital experiences.

EXPERIENCE

AT&T COMMUNICATIONS SERVICES INDIA PVT. LTD. – Chennai

AI Technical Business Analyst (PM), Consumer Technology & Experience *Aug 2022 – Present*

- **Led E2E product ownership** of AT&T's GenAI-powered Virtual Assistant (Google CCAI/Dialogflow), scaling omnichannel deployment across chat, voice, WhatsApp, and RCS to serve **1.5M+ monthly customer interactions** across consumer line of business
- **Drove AI-powered automation** through end-to-end conversation design, managing **350+ intents, 1,200+ training phrases, and RAG-powered knowledge retrieval** system that achieved **55% containment rate** and reduced live-agent escalations by **28%**, saving an estimated **$4.2M annually** in operational costs
- **Architected integration ecosystem** connecting AI layer with telephony infrastructure and backend CRMs via REST APIs, enabling real-time context enrichment and reducing average handle time by **32 seconds per interaction**
- **Delivered comprehensive technical documentation** including process flow charts, data flow diagrams, and BRDs aligned to enterprise AI strategy, supporting **12-person cross-functional team** across engineering, UX, and operations
- **Managed Agile delivery** in SAFe framework, owning backlog grooming and sprint planning for 2 **development squads** (18 developers); maintained **95% sprint commitment reliability** and tracked velocity via Jira/Confluence
- **Built KPI performance dashboards** using Power BI and SQL, monitoring **15+ metrics** including containment, CSAT, intent recognition accuracy (92%), and fallback rates, enabling data-driven optimization that improved NPS by **8 points**
- **Collaborated with US stakeholders** including Product Owners, Enterprise Architects, and Business SMEs to align AI roadmap with CX objectives, securing **$2.5M budget** for FY25 enhancements

Key Projects & Deliverables:

- GenAI Virtual Assistant (RAG-powered CCAI) – serving **1.5M+** monthly users
- Retail Hyper-Personalization Program – **15% uplift** in product recommendation CTR
- AI Performance Analytics Suite – Real-time monitoring across **6 channels**

VERIZON DATA SERVICES – Chennai

Consultant — Digital & Assisted Sales, Verizon Consumer Group (VCG) - Digital & Assisted Sales *Mar 2020 – Aug 2022*

- **Delivered actionable insights** through funnel analysis, A/B testing, and market research across **3 Line of Business** (Retail, Consumer, B2B), informing BRDs/PRDs for **15+ features** in Verizon's digital ecosystem.
- **Led cross-functional delivery** with UX, Data Science, and Product teams; achieved **94% on-time delivery** and **$1.5M+ incremental revenue** in FY21
- **Managed end-to-end execution** across retail, consumer, and B2B platforms, coordinating **8-12 stakeholders** including Scrum Masters, RTEs, and engineering in SAFe Agile framework
- **Facilitated Agile ceremonies** for **4 concurrent workstreams**, maintaining **<4% sprint spillover**

High-Impact Projects:

- Hum+ Wi-Fi Plan – $100K+ ARR, 23% attach rate for an add-on
- Omni Universal Cart – 11% order fulfillment growth, 13% reduced cart abandonment
- Split Fulfillment – Improved delivery by 2.1 days with COVID contactless deliveries, +3 CSAT points
- Early Termination Fee Redesign – Analyzed customer insights, 22% fewer service inquiries
- 3-Year Device Payment Plans – $320K pilot revenue, 14% higher upgrade rate

INFOSYS – Chennai

Senior Software Engineer *May 2016 – Feb 2020*

- Modernized legacy Work Statement Requirement Database (WSRD) application serving 1,200+ maintenance engineers across 5 Boeing facilities, integrating multiple REST APIs from disparate data sources to centralize aircraft maintenance work statements and technical requirements
- Led full-stack development of end-to-end platform featuring data encapsulation, API orchestration, master data management, and task workflow automation; delivered 6 major releases across 18-month timeline
- Coordinated cross-functional teams (UX designers, backend/frontend engineers, DBAs) to identify and mitigate 40+ critical risks, ensuring 99.2% system uptime post-launch
- Resolved production incidents through rapid troubleshooting and root cause analysis, reducing average downtime by 40% (from 8 hours to 4.8 hours) and increasing data processing throughput by 30% (12K to 15.6K records/day)
- Improved maintenance scheduling efficiency by 25%, enabling faster aircraft turnaround and saving an estimated $2.8M annually in operational delays
- Leveraged Java 8, React, Angular, Spring Boot, PostgreSQL, Oracle, Python to deliver robust and scalable solutions.

AWARDS AND ACHIEVEMENTS

- Won "Best in Show/All Around" Award for Innovation Jam with AT&T for presenting idea – "AT&T Helios – Zero Friction Convergence: Transforming the AT&T Bundle Experience into an AI-Fueled Seamless, One-Click Growth Engine" in 2026.
